Airbnb Market Intelligence Dashboard

Built on the Airbnb casestudy data: 2,953 listings across 10 cities and 10,000 reviews.

Key limitations

- Currency consistency across the 10 cities has **not been confirmed** — absolute price comparisons between cities (and the model's price-unit error metrics) should be treated with caution.
- Only **42 listing IDs** match between the listings and reviews datasets, and every matched listing is in **Paris** — review performance cannot be generalised across cities or property types.
- Prices are advertised nightly rates, not actual booking prices or revenue.

2,953 raw listing records; 2,949 remain after removing the 4 records with a missing city or room type. Use the City filter to focus the overview and price charts.

City Filter (Overview & Price Charts)

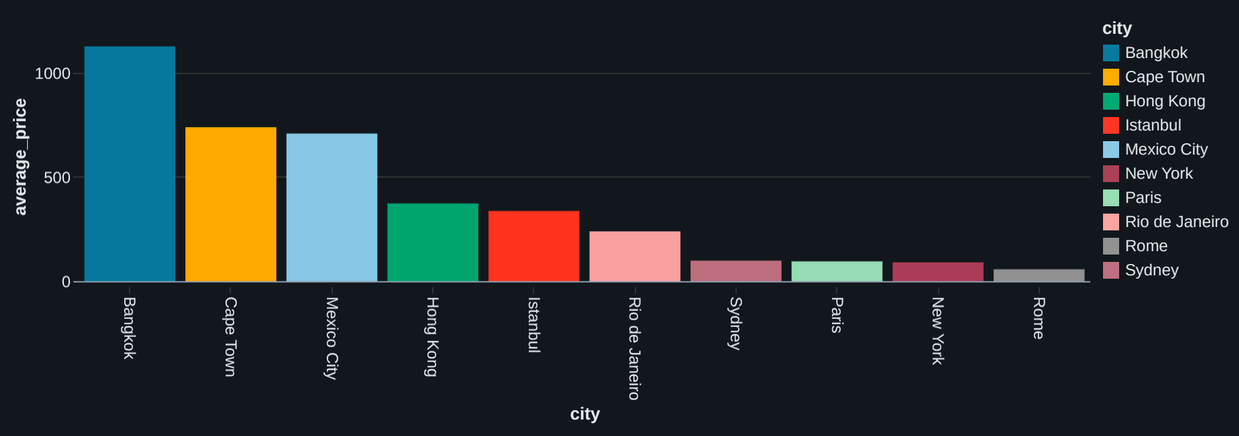

All

Listings by City

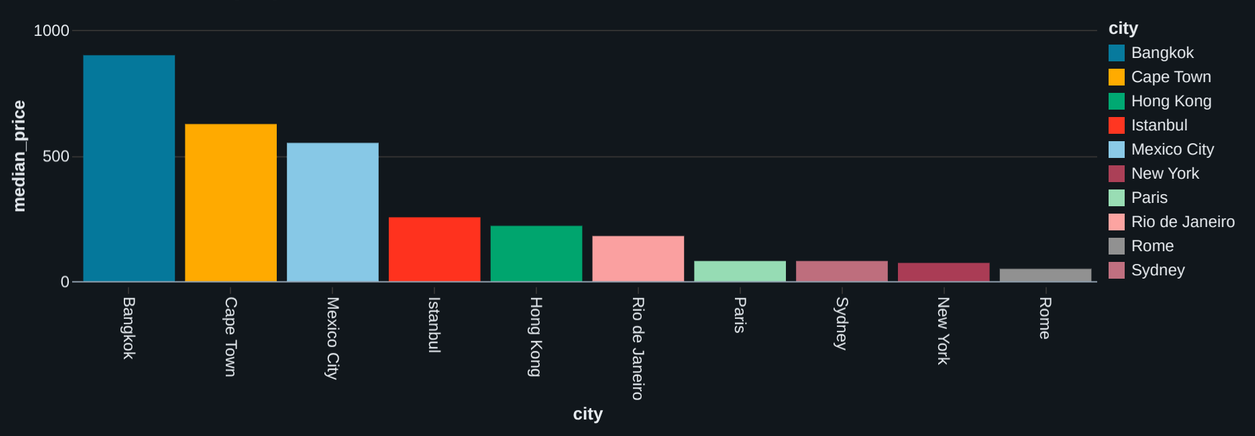

Advertised nightly prices. **Currency consistency across cities is unconfirmed** — compare absolute prices across cities with caution. Medians are shown alongside averages because a few very high advertised prices skew the averages.

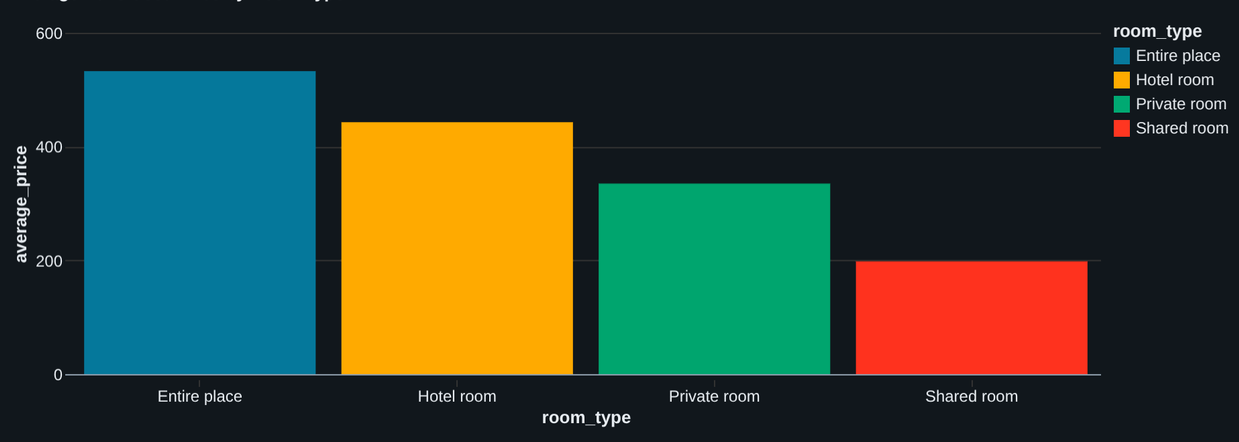

Average Advertised Price by City

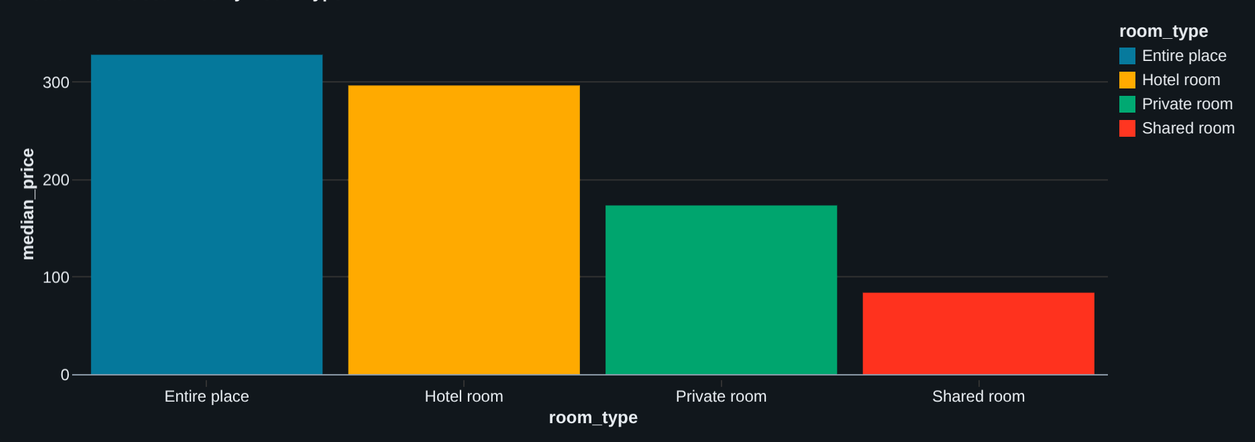

Median Advertised Price by City

Average Advertised Price by Room Type

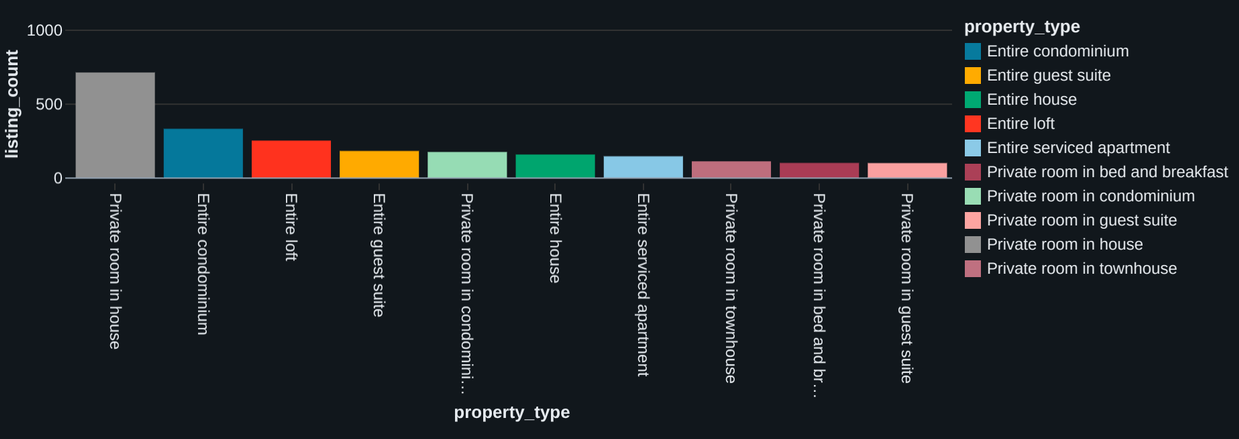

Median Advertised Price by Room Type

The ten most common property types, ranked by listing count, with their average advertised prices.

Top 10 Most Common Property Types

Average Advertised Price by Property Type (Top 10 Most Common)

Total review activity in the reviews dataset. **Only 42 listing IDs overlap with the listings dataset — all of them in Paris (62 review rows)** — so the top-reviewed listings cannot be enriched with city, room or property details, and review activity cannot be broken down by city.

Random Forest regressor (300 trees) trained on 2,949 listings with an 80/20 train-test split, using city, room and property type, capacity, stay limits, host metrics and review rating as features. R^2 of 0.46 means the model explains roughly 46% of advertised-price variance on the test set; MAE and RMSE are in the same (unconfirmed) local-currency units as the prices.
